Troubleshooting Site Speed with PHP X-Ray

🖨 Print

`</>` troubleshooting   👍 0

If your website is slow and you aren't sure why, our PHP X-Ray tool can find the exact plugin, database query, or script causing the delay.

Instructions:

1. Log in to DirectAdmin and click **PHP X-Ray**.
2. Click **Create Tracing Task**.
3. Enter your website URL (e.g., example.com/) and click **Create**.
4. Visit your website in a different tab and browse a few pages to "trigger" the trace.
5. Go back to PHP X-Ray in DirectAdmin and click on your task to see a full report of every slow request.

Included Developer Tools

Every account comes pre-loaded with the following tools available via SSH:

- **WP-CLI: Manage WordPress via wp command.**

- Composer: PHP dependency manager.

- Node.js & NPM: Available via the Node.js Selector in your dashboard.

- Python/Ruby: Deploy apps using our specialized Selectors.
